SUMMARY

Go backend developer with hands-on experience building and deploying REST and gRPC services, plus React and TypeScript interfaces. Built and deployed a live food-sharing platform with four Go microservices and a React frontend. Brings four years of professional IT support experience, with strengths in troubleshooting and explaining technical issues clearly. Based in Ngawi, East Java; willing to relocate to Jakarta.

SKILLS

Programming: Go (Golang), TypeScript, JavaScript
Backend & APIs: Echo, RESTful API, gRPC, Protocol Buffers, Microservices, JWT
Frontend: HTML, CSS, React, Vite
Data: SQL, PostgreSQL, GORM, Database Design
Infrastructure & Tools: Docker, Docker Compose, Linux, Git, GitHub Actions (CI/CD), Caddy, Cloudflare Tunnel
IT Support: PC Hardware, Technical Support
Languages: Indonesian (native); English (fluent reading and listening; developing speaking proficiency).

PROJECTS

BagiPangan (ZeroHunger) **Sep 2026 - Present**
A location-based food-sharing platform where donors post surplus food and recipients find it nearby — built as four Go microservices (gRPC + REST) with a React + TypeScript frontend, deployed behind Cloudflare.

- Designed four Go microservices (user, food, request, claim) sharing one protobuf contract, communicating over gRPC and exposed as REST APIs with Echo.
- Implemented location-based discovery using geodist (Haversine) radius filtering and the full claim lifecycle — quantity reservation, a 6-digit pickup code sent via Resend, donor verification, and automatic release on cancellation.
- Deployed the backend behind Cloudflare Tunnel + Caddy (TLS at the edge, centralized CORS, no inbound ports) with Neon Postgres, adding GitHub Actions CI (vet/tests, compose/Caddy validation, image builds) plus health probes and graceful shutdown.
- Built the React + TypeScript (Vite) frontend and deployed it on Cloudflare Pages.

Tech stack: Go, gRPC, Protocol Buffers, Echo, REST, PostgreSQL (Neon), GORM, JWT, React, TypeScript, Vite, Docker & Compose, Caddy, Cloudflare Tunnel/Pages, GitHub Actions

RentGo **July 2026**
Vehicle rental platform providing car browsing, availability checking, and rental-order management through a RESTful API.

- Built RESTful API endpoints with Echo for vehicle, customer, availability, and rental-order workflows.
- Designed PostgreSQL database models using GORM with transaction-aware rental status management.
- Implemented business logic for rental availability validation and order lifecycle management to ensure consistent booking workflows.

Tech stack: Go, Echo, GORM, PostgreSQL, RESTful API

BookLibrary **August 2026**

Book management backend service built with Go using gRPC communication for managing digital library resources through structured service-based operations.

- *Developed gRPC services for managing book data and library operations with structured backend communication.*
- *Applied database modeling practices using PostgreSQL and ORM-based data management.*
- *Structured the application for maintainable backend development with clear service separation.*

Tech stack: Go, PostgreSQL, gRPC, GORM, Docker

EDUCATION

Backend Golang Program - Hacktiv8 **May 2026 - Sep 2026**
Indonesia | Backend training program

SMK PGRI 02 Geneng **2018 - 2021**
Computer and Network Engineering

WORK EXPERIENCE

Information Technology Support Technician - Universitas PGRI Madiun **Mar 2022 - Jan 2026**
Indonesia

- Handled approximately 20 IT support requests per week from university lecturers and administrators, including repeat requests, covering PCs, laptops, printers, scanners, and personal devices.
- Prepared and maintained over 180 PCs across nine computer labs for approximately six annual UKK, TUK PPG, and internal TOEFL testing events; configured audio for TOEFL listening sections and supported around 1,000 participants per event.
- Guided lecturers and campus staff (ages 20 to 60+) in using new devices, software, and IT solutions for their issues, adapting explanations to each person's technical familiarity.
- Planned and completed annual upgrades for approximately 40 PCs across two computer labs, selecting hardware specifications and configuring operating systems, drivers, applications, and peripherals.
- Installed and maintained Windows applications, including Microsoft Office, browsers, and PDF tools.
- Kept backup PCs ready in each lab for rapid replacement if a workstation failed during testing, helping minimize disruption for participants.

CERTIFICATIONS

- IC3 Digital Literacy – Certiport
- Certificate of Completion, Backend Golang Program — Hacktiv8
